All, regardless of which GRE Stream,

ORCID

ORCID IDs serve as unique identifiers to help researchers distinguish their work and funders to link research outputs (publications, data, and other research activities) to funding. ORCID IDs are an important tool to ensure research visibility and mobilization, especially in international and interdisciplinary contexts. Increasingly, ORCID IDs are imbedded in many research workflows and implemented as policy requirements by journals, publishers, and funding agencies to link researchers and their scholarly activities. Researchers are encouraged to ensure their ORCID IDs are up to date with their York University affiliation to accurately link research to researchers, as well as enhance the university's research impact and electronic CV project. Email metrics@yorku.ca for any questions

BUDGET

Use of funds

Use of funds provided through this stream must only be for the following expenses incurred by York faculty/PhD/graduate students:

- Travel expenses for the York faculty and their research group (airfare must be economy class).

- Expenses for organizing workshops with partners.

- Grant writing for proposals with international partners.

- Costs associated with publishing jointly co-authored material with international collaborator in open access.

Early & mid-career researchers.
Building promising high risk/exploratory stage relationships.
In need of bridge funding to strengthen a proposal for external funding that was not successful in the last attempt.

Please note, there are up to fourteen 5,000 CAD awards that do not require a match to support proposals that meet these criteria. If your proposal does not meet these criteria but is otherwise academically meritorious and or the funding pool for these fourteen awards has been exhausted, we may require 50% matching for 5,000 CAD awards for approved proposals.

However, if you request 10,000 CAD, you will be required to come up with 50% matching for eligible expenses.

OL_ H Ž&*Ž&, # ' ' ' #0f&) OSLLZQLLL '425v''

These awards are primarily aimed at York faculty requiring some matching funds to be competitive when trying to attract significant external funding (at least 5x the amount requested from GRE).

We are hoping that York faculty requesting 15-30,000 CAD in GRE funding are asking for conditional approval (i.e., awarding of the GRE funds if they are successful in an external grant competition).

We are planning to set aside a *žf%ž ~ ° %+*Ž °)/ of the funding available under Stream A to support collaborations that f t this criteria.
