

Pavlina Akritas

How did you get to where you are now?

I started my career in 2007 as a software engineer at a small startup. I worked there for about 12 months before moving to a larger company. I spent the next 18 months at that company, where I worked on various projects and gained a lot of experience. In 2010, I moved to a third company, where I worked for about 12 months. I then moved to a fourth company, where I worked for about 12 months. Finally, in 2013, I moved to my current company, where I have been working for about 12 months. I have been very fortunate to work with great people and on interesting projects throughout my career.

What is the biggest difference you noticed between work and university in terms of engineering?

The biggest difference I noticed between work and university in terms of engineering is the level of responsibility and the pressure to deliver. In university, you are often given a lot of time to complete your assignments and projects. At work, you are often given a lot of time to complete your assignments and projects. In university, you are often given a lot of time to complete your assignments and projects. At work, you are often given a lot of time to complete your assignments and projects.

What challenges do you face on a day to day basis?

One of the challenges I face on a day to day basis is the pressure to deliver. I often have a lot of work to do and I need to make sure that I am meeting all of my deadlines. Another challenge is the lack of time to learn and grow. I often have a lot of work to do and I need to make sure that I am meeting all of my deadlines. Another challenge is the lack of time to learn and grow.

Real life example of engineering applied to your work.
